GEZE INAC: Convenient access management which demands minimal investment

In 2020, GEZE will be adding GEZE INAC to its range of state-of-the-art identification and control systems. GEZE INAC is a smart application for access control that can be operated as a stand-alone solution or as an add-on to building automation with GEZE Cockpit. GEZE INAC means access controls can be made simple and flexible. The standard version of GEZE INAC manages up to 60 access points, whilst the extended version handles up to 120. GEZE INAC is available with immediate effect.

Convenient access management for users

Access management systems must handle various demands and the most important from the user's perspective are: simple to use, and excellent reliability. Complex identification procedures are not just prone to errors but can also lead to the user's patience being tried and they are therefore less willing to cooperate. The latest GEZE INAC access management solution with the GEZE GCVR 800 reader provides a simple-to-use RFID-based module that can be operated on its own with a transponder or in combination with a PIN entry.

Convenient and secure solution within facility management

GEZE INAC is browser-based: Those responsible for security have access to individual doors and entrances via a modern, intuitive user interface that can be displayed from every PC or mobile end device with Internet access. Additional controller modules can be easily integrated and configured. Powerful software enables multi-optional function settings for the reader and ensures optimum availability of the relevant data. The system continuously processes status reports from the entrances. Faults, unauthorised access or attempts to manipulate are reported instantly and can be clearly identified. If necessary, all information can be called up in full at any time. GEZE INAC runs as an application on the GEZE Cockpit, which can be easily integrated into a higher-ranking building management system.

High degree of planning and investment security, smart design

GEZE INAC is a cost-effective system for planners and property operators, and a safe investment: The fully browser-based application can be easily installed on GEZE Cockpit as

a software solution. By utilizing open standards the system can be flexibly adapted to changing technical, digital, and legal challenges. Investment costs are low and the system remains up-to-date through regular, continuous development and software updates. A high-quality reader, GEZE GCVR 800 Touch / T, expands the possible applications of the INAC system even in architecturally more demanding or representative environments. GEZE INAC functions in line with GDPR data protection demands and can be readily adapted to relevant corporate data policies. In combination with GEZE Cockpit planners and operators are provided with additional options as part of dynamic safety and fire protection concepts, intelligent smoke and heat extraction, and the targeted release of escape routes.

Access management as a stand-alone solution: GEZE GCER 300

If only individual doors demand access management, GEZE offers the GCER 300 I/O Box, which provides an ideally dimensioned solution also in terms of investment. By using this stand-alone system in combination with up to two GEZE GCVR 300 T RFID readers, one or two doors can be controlled and monitored. Up to 200 access authorisations can be managed in total via transponders or a PIN.
